TOKEN WHITEPAPER

FBiT Token

A Fixed-Supply SPL Token on Solana

This document describes the FBiT token itself — its supply, allocation, deflationary design, and utility — independent of any single application built on top of it. Everything here is independently verifiable on the Solana blockchain.

01 · ABSTRACT

What Is FBiT?

FBiT (FutureBit) is a fixed-supply SPL token deployed on the Solana blockchain. It was created with three explicit design principles: a permanently capped supply with no minting backdoor, transparent on-chain allocation with no hidden team unlocks, and real utility — FBiT is the token that powers the FutureBit Staking protocol, but the token's properties (supply, security, deflationary mechanism) stand independently of any one application.

This document focuses specifically on the token: what it is, how many exist, where they went, how the supply behaves over time, and why its core properties can't be changed by anyone — including the team that created it. For details on the staking protocol itself, see the separate Staking Whitepaper at futurebit.in.

02 · TOKEN FUNDAMENTALS

The Basics

Every field below is directly readable from the token's on-chain mint account — nothing here relies on trusting a claim.

Token Name	FutureBit
Symbol	FBiT
Network	Solana Mainnet
Standard	SPL Token
Decimals	9
Total Supply	250,000,000 FBiT (fixed)
Mint Authority	Renounced (permanent)

MINT ADDRESS (VERIFY ON SOLSCAN)

5uJ8rkiqEs5uzERCqVw9a1eC6BkP54MZAF3D229dyoME

WHAT "MINT AUTHORITY RENOUNCED" ACTUALLY MEANS

No One Can Ever Create More FBiT

Every SPL token on Solana has a "mint authority" — a key with the power to create new tokens out of thin air, diluting everyone who already holds them. FBiT's mint authority has been permanently set to null on-chain. This is not a promise or a policy — it's a cryptographic fact that anyone can verify directly on Solscan in seconds. There is no multisig, no timelock, no "temporary" pause on minting. The authority is gone, irreversibly, which means the 250,000,000 supply is the final, permanent supply of FBiT that will ever exist.

03 · TOKENOMICS & ALLOCATION

Where the 250,000,000 FBiT Went

No presale, no seed round, no private allocation to insiders. The entire fixed supply was allocated into exactly two on-chain-verifiable buckets:

Staking Reserve — 229,830,026 FBiT · 91.9%

Liquidity — 20,169,974 FBiT · 8.1%

🏦 **Staking Reserve — 91.9%**

Funds the auto-emission system that pays out staking rewards — released gradually over an approximate 19-year nominal runway at a targeted 12,000,000 FBiT/year, not dumped at once.

💧 **Liquidity — 8.1%**

Deployed into the live FBiT/SOL trading pool. 100% of this allocation is locked or burned — no wallet, including the team's, can ever withdraw it.

03.1 · EMISSION SCHEDULE

Gradual Release, Not a Cliff

The staking reserve isn't released all at once — it emits at a steady, predictable rate rather than a large unlock that could crash the market. This is the core mechanism that lets FutureBit Staking offer real, sustainable rewards funded by the token's own reserve rather than new buyers' money.

12,000,000
FBIT / YEAR TARGET EMISSION

~19 Years
NOMINAL RESERVE RUNWAY

0%
TEAM / PRESALE ALLOCATION

03.2 · DEFLATIONARY DESIGN

Supply Shrinks Over Time

Every staking claim, compound, and unstake burns a real portion of FBiT — permanently, verifiably, on-chain. As protocol activity grows, the total burned figure grows with it, meaning circulating supply can decrease even as new emission continues to fund rewards. The token is designed to get scarcer with use, not just with time.

04 · TOKEN UTILITY

What FBiT Is Actually Used For

A token is only as valuable as what you can genuinely do with it. FBiT has real, live utility today — not a promise for later.

🎯

Stake for Dynamic Rewards

Lock FBiT in the FutureBit Staking protocol to earn Proof-of-Stake rewards that automatically adjust (10%-300% APY) based on total tokens staked.

🌐

Network & Referral Value

FBiT is the unit of value moving through a two-layer, multi-level referral network — commissions are paid directly in FBiT, on-chain.

💧

Liquidity Provision

Provide single-sided SOL to the FBiT/SOL pool and earn real trading fees, without needing to hold FBiT upfront.

🔄

Open Market Trading

FBiT trades freely on Solana DEXs (currently Meteora) — no permission needed, no lock-up to simply hold or trade it.

Looking Ahead: Beyond Staking

As the protocol matures into Phase 4 of the roadmap, FBiT is planned to take on a governance role — letting holders who actually use the network participate in decisions about its future, rather than any single team unilaterally deciding. This is consistent with the token's core philosophy: control should sit with the people who hold and use it, not with a central party.

05 · SECURITY & VERIFIABILITY

Nothing Here Requires Trust

Every claim in this document can be independently checked. Here's exactly how.

🔒 Mint Authority Renounced

Check the mint account on Solscan — the mint authority field reads "None". No one can ever create more FBiT.

💧 Liquidity Locked/Burned

The FBiT/SOL pool's liquidity position is verifiably locked — check the lock contract directly, don't take our word for it.

📜 Open-Source Contracts

The full staking program source is public on GitHub — read exactly how tokens move, with no black box.

🛡 Platform Ownership Renounced

The staking protocol's own admin authority is zeroed on-chain — no one can alter core rules retroactively.

How to Verify It Yourself (5 Minutes)

Go to Solscan and paste the mint address above	`solscan.io`
Check "Mint Authority" field	`should read "None"`
Check "Update Authority" (metadata)	`should read "None"`
Read the live token/liquidity dashboard	`futurebit.in/trust`

06 · TOKEN ROADMAP

Where FBiT Is Headed

Goals for the token specifically — not guarantees of a date or a specific exchange.

- **Foundation** COMPLETE
  Fixed supply established, mint authority renounced, liquidity locked, live DEX trading on Solana.
- **Deepening Liquidity & Reach** CURRENT
  Additional DEX liquidity depth, wider community distribution, data-provider listings (CoinGecko, GeckoTerminal, CoinMarketCap).
- **Exchange Listings** PLANNED
  Tier-2/3 centralized exchange outreach, working toward Tier-1 listing readiness.
- **Governance Utility** PLANNED
  FBiT holders gain a direct say in protocol parameters via on-chain governance.
